ABSTRAK

Abstrak: Pendidikan Islam telah menjadi aspek fundamental dalam masyarakat Muslim, membentuk nilai, keyakinan, dan perilaku individu. Di era kontemporer, lanskap pendidikan berkembang pesat, menuntut refleksi terhadap kondisi terkini dan proyeksi masa depan pendidikan Islam agar tetap relevan dan transformatif. Artikel ini mengkaji perubahan pendidikan Islam melalui analisis literatur dan SWOT, serta menyoroti kebutuhan integrasi subjek modern seperti sains, teknologi, teknik, seni, dan matematika dalam kerangka pendidikan Islam. Metode penelitian menggunakan pendekatan kualitatif dengan studi literatur yang dikumpulkan dari database akademik seperti Google Scholar, JSTOR, dan ProQuest. Data dianalisis menggunakan metode SWOT untuk menilai kekuatan, kelemahan, peluang, dan ancaman pendidikan Islam. Hasil penelitian menunjukkan bahwa pendidikan Islam menghadapi tantangan signifikan seperti kurangnya inovasi metode pengajaran, keterbatasan sumber daya, dan akses yang tidak merata ke pendidikan berkualitas. Namun, terdapat peluang besar dalam kemajuan teknologi, peningkatan kesadaran global, dan potensi kemitraan dengan institusi internasional. Transformasi pendidikan Islam membutuhkan inovasi dalam metode pengajaran, adopsi pendekatan interaktif dan kontekstual, serta pemanfaatan teknologi informasi dan komunikasi untuk meningkatkan keterlibatan dan relevansi pendidikan. Pendidikan Islam juga harus menjawab isu sosial kontemporer seperti keadilan sosial, keberlanjutan lingkungan, dan kepemimpinan etis, sehingga siswa dapat berkembang menjadi warga global yang bertanggung jawab dengan integritas moral dan spiritual yang kuat. Artikel ini diharapkan dapat berkontribusi pada diskusi akademik mengenai pendidikan Islam dan mendorong praktik pendidikan yang lebih adaptif dan transformatif.

Abstract: Islamic education has been a fundamental aspect of Muslim society, shaping individuals' values, beliefs, and behaviors. In the contemporary era, the educational landscape is rapidly evolving, demanding reflection on the current state and future projections of Islamic education to remain relevant and transformative. This article examines changes in Islamic education through literature analysis and SWOT, highlighting the need for integrating modern subjects such as science, technology, engineering, arts, and mathematics within the Islamic education framework. The research employs a qualitative approach with literature studies collected from academic databases such as Google Scholar, JSTOR, and ProQuest. Data is analyzed using the SWOT method to assess the strengths, weaknesses, opportunities, and threats of Islamic education. The findings reveal that Islamic education faces significant challenges such as a lack of innovative teaching methods, limited resources, and unequal access to quality education. However, there are substantial opportunities in technological advancements, increasing global awareness, and potential partnerships with international institutions. Transforming Islamic education requires innovation in teaching methods, adopting interactive and contextual approaches, and utilizing information and communication technology to enhance engagement and educational relevance. Islamic education must also address contemporary social issues such as social justice, environmental sustainability, and ethical leadership, enabling students to develop into responsible global citizens with strong moral and spiritual integrity. This article aims to contribute to the academic discussion on Islamic education and encourage more adaptive and transformative educational practices.

A. INTRODUCTION

Islamic education has always been a fundamental aspect of Muslim societies, shaping individuals' values, beliefs, and behaviors within these communities (Alfiyanto et al., 2023; Ikhwan et al., 2023; Kurnia & Edwar, 2021). However, the educational landscape is evolving rapidly in the contemporary world, and Islamic education is not immune to these changes. As we navigate the complexities of the modern era, it becomes imperative to reflect on the current state of Islamic education and project its future direction to ensure that it remains relevant, impactful, and transformative (Anurogo & Napitupulu, 2023).

The transformation of Islamic education not only demands changes in curriculum and teaching methods but also requires deep reflection on the goals, values, and philosophy of education itself (Haendel et al., 2021; Irianto Setyo Wibowo, 2023; Marjuni, 2022; Purwanto et al., 2023; Cape & Jamilus, 2023)s. Islamic education must be able to answer the needs of the times while still adhering to the basic principles handed down by the Islamic scientific tradition. This is essential to creating a generation of Muslims who possess academic and professional competence and strong moral and spiritual integrity.

Islamic education has traditionally been synonymous with religious teaching, focusing primarily on studying the Qur'an, Hadith, and Islamic jurisprudence (Islam, 2024). While these basic teachings remain essential, there is a growing need to integrate modern subjects such as science, technology, engineering, arts, and mathematics (STEAM) within the framework of Islamic education (Moslimany et al., 2024; Murhayati et al., 2023). This integration will equip students with the skills and knowledge necessary to thrive in the contemporary world while remaining grounded in Islamic principles.

The pedagogical methods used in Islamic education are often rote memorization and recitation, which can limit critical thinking and creativity (Hashim, 2024; Osman et al., 2024). Embracing innovative teaching techniques, Interactive Learning and experiential education can foster a more engaging and dynamic learning environment, nurturing well-rounded individuals capable of meaningfully contributing to society (Bhoi, 2024). The current state of Islamic education must also address contemporary social challenges such as social justice, environmental sustainability, and ethical leadership (Baharuddin et al., 2024). By incorporating discussions of these critical issues into the curriculum, students can develop a comprehensive understanding of their role as responsible global citizens guided by Islamic values.

The future of Islamic education lies in prioritizing holistic development, which includes intellectual, spiritual, emotional, and physical growth (Surbakti et al., 2024). This approach recognizes the multifaceted nature of human beings. It seeks to nurture individuals who are knowledgeable about their faith but also compassionate, empathetic, and equipped to navigate the complexities of the modern world with

ethical integrity (Berges, 2023). Encouraging critical thinking and inquiry-based Learning in Islamic education will empower students to analyze, question, and evaluate information, thus fostering independent thinking and a deep understanding of Islamic teachings. This approach will enable individuals to engage with diverse perspectives and contribute meaningfully to intellectual discourse (Haryadi et al., 2024).

The future of Islamic education should emphasize the principles of global citizenship and service to humanity (Budiono et al., 2024). Islamic educational institutions can cultivate a generation of individuals committed to serving others and effecting positive change in the world by instilling a sense of responsibility to address social injustice and international challenges (Fatkhurin Fuad et al., 2023; Sofiani et al., 2024). In conclusion, reflecting on the current state of Islamic education and its projected future direction is essential in ensuring it remains relevant and transformative in the 21st century. By embracing a holistic approach to teaching, integrating modern subjects, encouraging critical thinking, and instilling a sense of global citizenship, Islamic education can empower individuals to uphold their faith while actively contributing to the betterment of society. As we navigate the complexities of the modern era, the evolution of Islamic education stands as evidence of its enduring significance and adaptability in shaping a brighter future for generations to come.

Through this article, we hope to make a real contribution to academic discussions on Islamic education and encourage the implementation of more adaptive and transformative educational practices. Islamic education must become agents of change that not only equip students with knowledge but also inspire them to become leaders with integrity and contribute positively to society. This article is expected to be the initial foothold for further developing an innovative and transformative model of Islamic education, which is relevant to the local context and able to compete at the global level. The results of this study are expected to open new insights and encourage the creation of positive changes in the Islamic education system in various parts of the world.

B. RESEARCH METHODS

This study aims to fill the gap in the literature on transformative Islamic education by focusing on two main aspects: critical reflection on current Islamic education practices and projections of future directions to optimize the role of Islamic education in facing global challenges. The reflection component involves a thorough analysis of the strengths and weaknesses of the existing Islamic education system. This includes evaluating current curricula, teaching methodologies, resource availability, and accessibility to quality education. On the other hand, the projection component explores innovative educational models and strategies that align with contemporary

demands. This encompasses integrating modern subjects such as science, technology, engineering, arts, and mathematics within the Islamic education framework to enhance its relevance and effectiveness.

The research employs a qualitative approach with a comprehensive literature study and an in-depth SWOT analysis. The literature study involves collecting data from various academic databases, including Google Scholar, JSTOR, and ProQuest, to gather relevant scholarly articles, books, and reports on Islamic education. This extensive literature review helps identify existing research gaps and provides a solid foundation for the analysis. The SWOT analysis is utilized to systematically evaluate the strengths, weaknesses, opportunities, and threats of Islamic education in the context of global challenges. This method allows for a nuanced understanding of the internal and external factors affecting Islamic education and facilitates the development of strategic recommendations.

Data collected through the literature study will be analyzed descriptively and analytically to provide a comprehensive picture of the current dynamics of Islamic education. Descriptive analysis will summarize the key findings from the literature, while analytical techniques will be employed to interpret these findings in the context of the SWOT framework. This dual approach ensures that the research captures both the breadth and depth of the issues at hand, offering a holistic view of the opportunities and challenges facing Islamic education today. The ultimate goal is to identify actionable insights and propose strategies that can enhance the transformative potential of Islamic education, making it more adaptable and responsive to the needs of a rapidly changing world.

C. RESULTS AND DISCUSSION

1. Literature Analysis of Transformative Islamic Education

Recent research in transformative Islamic education emphasizes integrating direct experience, reflection, dialogue, and concrete action into the learning process to deepen students' understanding of Islamic values, enhance their spiritual connections, and develop critical and independent thinking skills. Effective learning models in this context include interactive methods, contextual approaches, and integration of information and communication technology (Harahap, 2023).

The transformative approach in Islamic education is not only theoretical but also practical, focusing on the reconstruction and reform of Islamic religious education to foster moral character (*akhlakul karimah*) and shift individual piety towards social piety in the global era (Zuhri et al., 2014). Based on philosophical and theological arguments, this approach is seen as a rational need aimed at maturing the individual into a fully realized human being through the transformation and integration of religious knowledge and values.

Furthermore, transformative Islamic education is essential to create an intellectual climate sensitive and contextual to the challenges of the times, continuously based on

the awareness of divinity as the reality and true purpose of human life (Hilal, 2012). This educational paradigm is essential to respond to the social changes brought about by globalization, aiming for excellence reflected in all aspects of life and based on the principles of liberalization, humanization, and transcendence (Subairi, 2015). In short, significant developments in transformative Islamic education involve holistic approaches that combine theoretical depth with practical application, fostering intellectual and spiritual growth in learners to better respond to contemporary societal challenges.

2. Challenges, Open Questions, and Opportunities for Transformative Islamic Education

The field of transformative Islamic education faces significant challenges and open questions, especially around integrating spiritual and social dimensions in a global context and the practical application of transformative educational principles. However, it also presents several opportunities for development and improvement (Harahap, 2023; Zuhri et al., 2014), namely (1) Curriculum development, namely refining the curriculum to include a more interactive and contextual approach that integrates information and communication technology can make Islamic education more relevant and exciting for students (Harahap, 2023); (2) Leadership and institutional change, i.e. implementing transformative leadership in Islamic educational institutions can significantly improve the image of society and making it essential in the development of knowledge (Mumtaz, 2021; Winarni & Irwanto, 2020); (3) Social and Spiritual Integration: There is an opportunity to develop an educational model that not only focuses on spiritual growth but also answers social problems, thus fulfilling the transformative potential of Islamic education (Nurdin, 2013); (4) Critical and reflective thinking, i.e. encouraging critical and independent thinking among students through transformative educational practices can help foster a better Muslim community intellectually vibrant (Hilal, 2012); and (5) Global responsiveness, which adapts Islamic education in order to better respond to global changes and challenges, thus ensuring that education remains relevant and effective in achieving its educational goals (Dwi & Maskuri, 2023).

3. SWOT Analysis towards Transformative Islamic Education

SWOT analysis is vital in shaping transformative Islamic education by evaluating internal strengths and weaknesses and external opportunities and threats (Halim et al., 2023; Wahyudi, 2023). Strategic policies in Islamic educational institutions vary, including labels, objectives, proposals, decisions, authorizations, programs, outputs, outputs, theories, and processes (Paramansyah & Wicaksono, 2022). Effective strategies are essential for Islamic educational institutions to adapt to societal changes, offer quality services, and encourage innovation (Amet & Kurnia, 2023).

Transformational Islamic educational institutions that are entrepreneurship-oriented aim to nurture successful entrepreneurs and empower society through skill development and knowledge acquisition (Sholeh et al., 2023). By leveraging SWOT analysis and strategic policies, Islamic educational institutions can navigate challenges, seize opportunities, and drive transformative change in education to meet the evolving needs of society.

Table 1. SWOT Analysis towards Transformative Islamic Education

No.	Analysis Aspect	Analysis Results
1	Strength	1. Comprehensive Teachings: Islamic education covers various aspects of life.
		2. Spiritual Values: Islamic education emphasizes spiritual development.
		3. Rich History and Traditions: Have a long history and significant contributions to science and culture.
		4. Solid Community: Attachment within the community provides strong social support.
2	Kelemahan	1. Lack of Innovation: Getting stuck in traditional teaching methods.
		2. Resource Limitations: Financial and material resources are often limited.
		3. Limited Access: Access to quality education is still limited in rural and remote areas.
		4. Lack of Teacher Training: Lack of training programs for teachers to develop effective and engaging teaching methods.
3	Peluang	1. Technology and Digitalization: Technological advancements open up great opportunities for e-learning and digital resources.
		2. Partnership and Collaboration: Opportunities for cooperation with international educational institutions and the private sector.
		3. Increased Global Awareness: Global interest in cross-cultural and religious understanding is growing.
		4. Increased Education Investment: The focus of governments and international organizations on investment in the education sector.
4	Ancaman	1. Extremism and Radicalism: Threats from extremist groups that can tarnish the image of Islamic education.
		2. Damaging Globalization: The negative influence of globalization can erode traditional values and cultural identity.
		3. Global Competition: Must contend with an increasingly advanced global education system.
		4. Policy Change: Unsupportive government policies may restrict the development of Islamic education.

4. Reflection and Projection of the Direction of Islamic Education

Reflection in Islamic education involves self-assessment and improvement (Purwanto et al., 2023). It emphasizes integrating various approaches, such as normative, anthropological, sociological, and philosophical, to understand Islamic teachings comprehensively (Kasman, 2021). The Islamic Religious Education

curriculum aims to increase faith, piety, and practical knowledge through a well-structured system of objectives, content, processes, and assessments (Nafisah, 2023). Islamic education develops by combining technological advances while maintaining the core values of Islam (Usiono, 2022). Projections in Islamic education involve future planning, such as projecting the needs of lecturers to maintain program quality and growth (Purnomo, 2021). By reflecting on current practices and projecting future needs, Islamic education can adapt to modern challenges while maintaining its fundamental values and principles. Reflection on current conditions shows that Islamic education has great potential to be transformative if it can overcome internal weaknesses and take advantage of external opportunities. Innovating teaching methods, improving teacher training, and expanding access to quality education are essential.

Projections of the direction of Islamic education, namely (1) Technology integration, namely integrating technology in the learning process to make education more inclusive and efficient; (2) Curriculum development, namely compiling a curriculum that is relevant to the needs of the times, combining modern science with Islamic values; (3) Teacher capacity building, i.e., conducting continuous training programs for teachers so that they can adopt innovative and exciting teaching methods; (4) Global collaboration, i.e., increasing collaboration with international educational institutions to exchange ideas and best practices; and (5) Increased awareness and value education, namely emphasizing the education of moral and ethical values to form individuals with integrity and contribute positively to society. With the right strategy and commitment to continue to innovate, Islamic education can play an essential role in shaping individuals and societies that are superior, characteristic, and globally competitive.

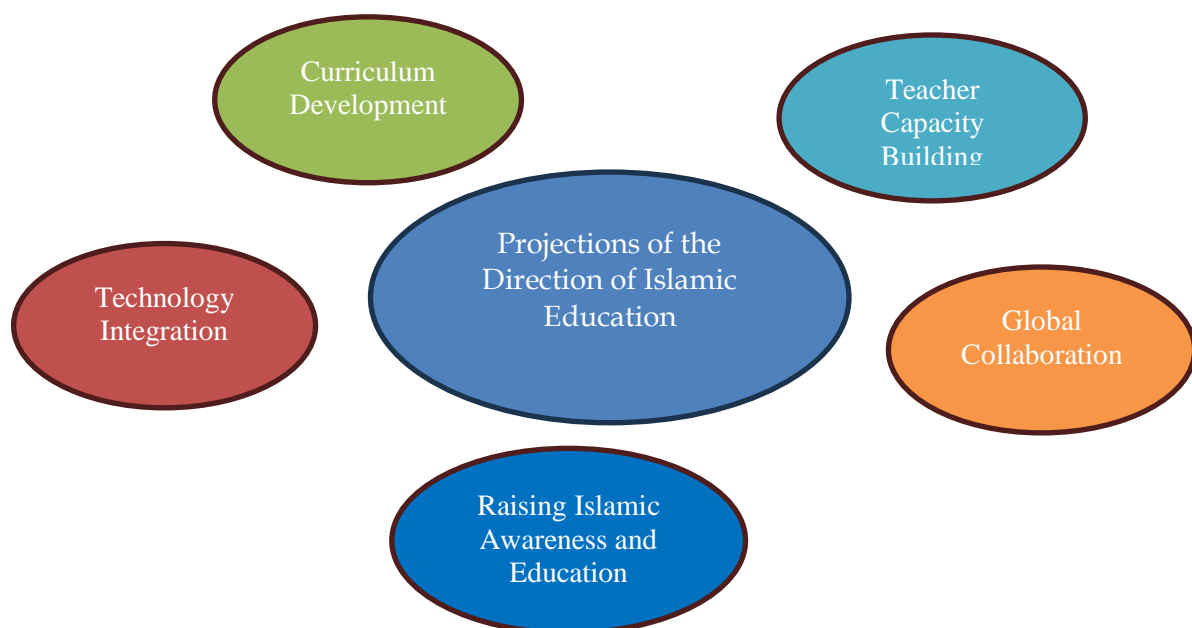

Figure 1. Projections of the Direction of Islamic Education

D. CONCLUSIONS AND SUGGESTIONS

This article provides an in-depth analysis of Islamic education in the evolving modern world. Islamic education has long been a fundamental aspect of Muslim societies, shaping individual values, beliefs, and behaviours. However, to remain relevant and transformative, Islamic education must adapt to changing times while adhering to the basic principles handed down by the Islamic scholarly tradition. The results of this study show that Islamic education faces significant challenges but also has excellent development opportunities. Key challenges include a lack of innovation in teaching methods, limited resources, and unequal access to quality education. On the other hand, significant opportunities lie in technological advancements, increased global awareness, and the potential for partnerships and collaborations with international institutions.

Transformative Islamic education needs to integrate modern subjects such as science, technology, engineering, art, and mathematics (STEAM) within the framework of Islamic education to equip students with the skills required in the contemporary world. In addition, teaching methods must evolve from traditional rote memorization to a more interactive and contextual approach, using information and communication technologies to increase educational engagement and relevance. It is essential to emphasize holistic development that includes students' intellectual, spiritual, emotional, and physical growth. Islamic education must answer contemporary social issues such as social justice, environmental sustainability, and ethical leadership so that students can develop into responsible global citizens with strong moral and spiritual integrity.

To achieve these goals, SWOT analysis suggests that Islamic education should draw on internal strengths such as comprehensive teachings and solid spiritual values while addressing weaknesses such as lack of innovation and limited resources. With the right strategies, including technology integration, relevant curriculum development, teacher capacity building, global collaboration, and an emphasis on value education, Islamic education can play an essential role in shaping individuals and societies that are superior, characteristic, and globally competitive. Thus, the reflections and projections in this article provide a strong foothold for the further development of innovative and transformative models of Islamic education, which are relevant to the local context and able to compete at the global level. This article is expected to make a real contribution to academic discussions on Islamic education and encourage implementing more adaptive and transformative educational practices so that Islamic education can continue to develop and adapt to the challenges and needs of the times.
